

Run on www and check on localhost:3000

This should be on the homepage.

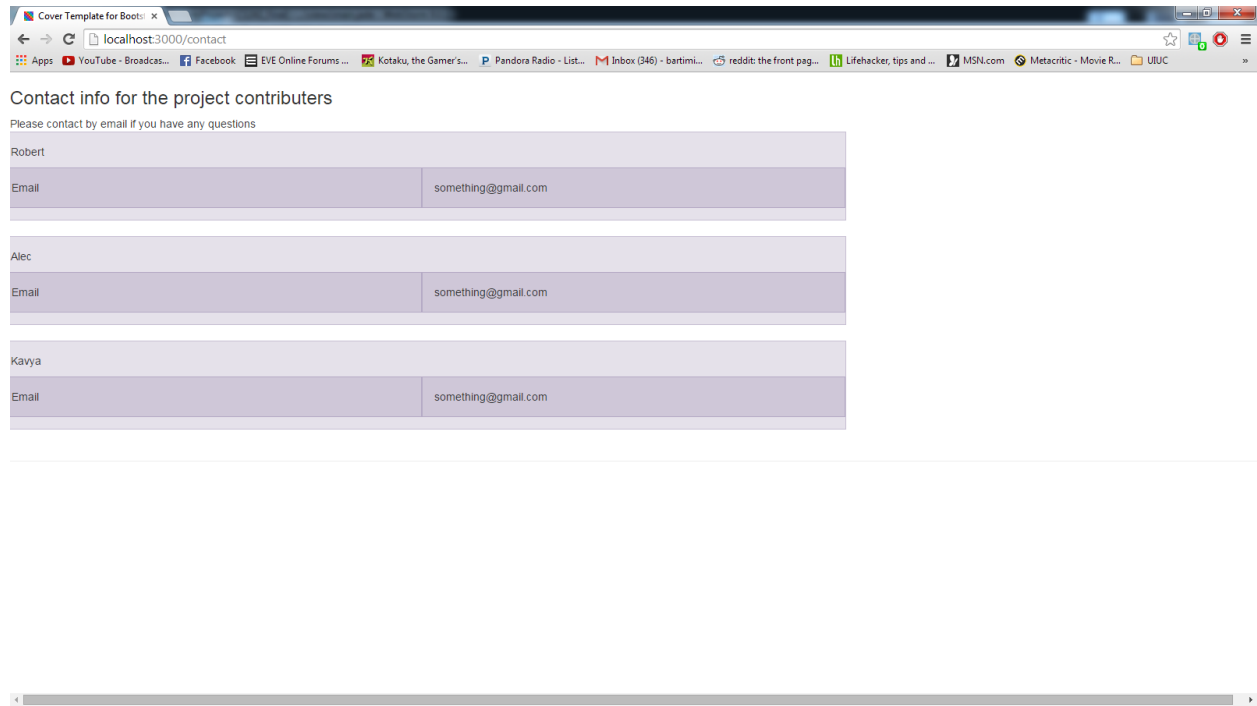

Clicking on main should lead to this.

These are placeholder images. When the api to get the images is added images appear based off of the tag inputted. These are then each a link. At the moment they don't go

anywhere but they will link to a mosaic of that image made from images of the same and similar tags once that is implemented.

Clicking on contact will lead to this page.

This page shows info/contact info for the contributors of the project. The link is on the bottom of every page.

This favicon should be on the tab for every page.

The active page should also be underlined. So either Main or Home but not both.
